An air ioniser is a device that uses high voltage to ionise air molecules. Negative ions, or anions, are particles with one or more extra electrons, conferring a net negative charge to the particle. Cations are positive ions missing one or more electrons, resulting in a net positive charge. Some commercial air purifiers are designed to generate negative ions. Another type of air ioniser is the electrostatic discharge ioniser used to neutralise static charge. In 2002, in an ...

The third in a series of seven webisodes about Panasonic Air Conditioners highlights the latest 'Advanced E - ion Air Purification System'. The system works behind the scenes to keep the air in the home fresh clean and clear. It does this by deploying charged air particles which attach themselves to any virus, bacteria or mould then filters these ...

To activate the S-Plasma ion function : Press the S-Plasma ion on the remote control. indicator will appear on the display of remote control and the air-conditioner as shown below. To deactivate S-Plasma ion function: Press the button when the S-Plasma ion function is on. S-Plasma ion function you selected will be cancelled.

What is the S-Plasma ion function in an Air-conditioner ...

Small air ions have more positive effects on the human body. Large air ions have more capabilities to purify the air. When you study an ionization tendency you need to focus on small or large ions only. This is important when you compare it with ionization tendencies of other locations. Every ion molecule possesses its unique mobility value.

The ion generator has been installed in my building for approximately one and a half years, and I have to say the overall impact on what it accomplished was dramatic. The recovery area of my animal hospital was an enclosed area with no return air; the room was originally too warm - stagnant air to be exact, with an overpowering urine smell!
