M. G. Say, Performance and design of AC machines: Pitman, London, 1970. Efficiency and power factor 2. Assume efficiency and power factor(from experience) to convert shaft power to input power, then compute rotor volume that is $(\text{rotor diameter } D)^2(\text{rotor length } L)$.

Traditional Design of Cage Rotor Induction Motors

The motor which is designed to operate on AC and DC power both is known as Universal motor or Series wound motor. It performs very well on AC because in case of AC the current in both the field and the armature alternates in synchronism manner and hence, the resulting mechanical force occurs in the constant direction of rotation.
