vectors and tensors.

This volume begins with a discussion of Euclidean manifolds.

The principal mathematical entity considered in this volume is a field, which is defined on a domain in a Euclidean manifold. The values of the field may be vectors or tensors.

Volume 1

In mathematics, a field is a set on which addition, subtraction, multiplication, and division are defined and behave as the corresponding operations on rational and real numbers do. A field is thus a fundamental algebraic structure which is widely used in algebra, number theory, and many other areas of mathematics. The best

the structure of L^∞
algebra. 4.1.3.2

Definition. An elliptic L^∞ algebra is a local L^∞ algebra L as above with the property that (L, d) is an elliptic complex.

Remark: The reader who is not comfortable with the language of L^∞ algebras will lose little by only considering elliptic dg Lie algebras. Most of our examples of classical field
