Thus, based on the sequence comparison of squirrel monkey CGβ promoter with marmoset CGβ, human CGβ and human LHβ promoters, we propose a model of the squirrel monkey CGβ gene and promoter wherein the expression of the gene is governed by two promoters: expression of the squirrel monkey CGβ gene in the pituitary is driven by a promoter that is found immediately upstream of exon 1, and contains a TATA-box, and cis-elements important for pituitary-specific expression; on the other hand ...
