Normally, some blood enters the lungs through other passages within the heart and its arteries. Before your baby is born, it receives blood through a hole between the top chambers of your baby's heart (foramen ovale), and blood is pumped out to the rest of your baby's body. After birth, the foramen ovale usually closes, but in pulmonary atresia it may stay open.

Pulmonary atresia with ventricular septum defect ...

Pulse oximetry is a simple bedside test to determine the amount of oxygen in a baby's blood. Low levels of oxygen in the blood can be a sign of a CCHD. Newborn screening using pulse oximetry can identify some infants with a CCHD, like coarctation of the aorta, before they show any symptoms.
