The endocardial cushions, which ultimately become transformed into dense connective tissue, form on the dorsal and ventral walls of the atrioventricular canal. As they grow into the canal, the two cushions meet and separate the atrioventricular canal into right and left channels (Figures 5 and 6). The early endocardial cushions serve as primitive valves that assist in the forward propulsion of ...

An answer to this question is readily found in the scientific field of embryology. It may surprise you to learn that we have known for decades that the unborn are living human beings. For example, consider the following quotations from university level embryology textbooks: A zygote is the beginning of a new human being.
