A discussion of the connection between classical and statistical thermodynamics completes the development of the mathematical formulation of the statistical theory. Chapter 14 is devoted to the statistics of an ideal gas. Chapters 15 through 19 present important examples of the application of the statistical method. The last chapter introduces ...

Classical and Statistical Thermodynamics: Carter, Ashley ...

Classical thermodynamics is based on the four laws of thermodynamics. In thermodynamics we are concerned with the behavior of vast quantities of particles in the substances that we study. The laws of thermodynamics are the laws of the generalized behavior of the particles. These laws are as follows: 1. The zeroth law deals with temperature and

In classical thermodynamics dealing with the volume work, two types of heat capacity are distinguished: C_V and C_p . The specific heat c_V [$J g^{-1} K^{-1}$] and the molar heat capacity C_V [$J mol^{-1} K^{-1}$] are interrelated through $C_V = c_V M_r$, where M_r is the molar mass. The difference between C_V and C_p for solids is.

The classical version of statistical mechanics, in which we divide up phase-space into cells of equal volume, is valid in this limit. The number of states, $\Omega(E, V)$, lying between the energies E and $E + \delta E$ is simply equal to the number of cells in phase-space contained between these energies.

In classical thermodynamics, the second law of thermodynamics is usually rationalized by considering processes involving the conversion of work to heat by engines that return to their original thermodynamic state after one cycle. Comparison is made to a hypothetical engine, known as a Carnot engine, which is imagined to execute a reversible cycle.

Classical thermodynamics concerns the relationships between bulk properties of matter. Nothing is examined at the atomic or molecular level. Statistical thermodynamics seeks to explain those bulk properties in terms of constituent atoms. The statistical part treats the aggregation of atoms, not the behavior of any individual atom.
