Design primer for hot climates (Book, 1980) [WorldCat.org]

The first climate that I want to discuss is the Hot Arid Climate. The main characteristics for a hot arid climate include: -Hot dry summer and a cold dry winter-Very little rainfall and vegetation coverage-High temperature difference between day and night-Very low humidity-Desert areas include wind and dust . The main idea in a hot arid zone is ...

Designing Homes for Hot Arid Climates

It's generally accepted that homes use more energy in climates that require more heating than cooling. Wisconsin is a good example of a heating-dominated climate, while Florida is clearly cooling dominated. (You can find the heating and cooling dominance of your state here.) Homes in colder climates use more energy for heating than those in warmer climates use for air-conditioning.
