The Eysenck Personality Questionnaire, or E.P.Q., measures the three traits described in the personality theory of Hans Eysenck. These are extraversion , psychoticism and neuroticism . It was first published commercially in 1975 then, in revised form, by Eysenck, Eysenck and Barrett (1985) in the journal Personality and Individual Differences .

Eysenck Personality Questionnaire | Psychology Wiki | Fandom

The Eysenck Personality Questionnaire (EPQ) is a questionnaire to assess the personality traits of a person. It was devised by psychologists Hans Jürgen Eysenck and Sybil B. G. Eysenck. Hans Eysenck's theory is based primarily on physiology and genetics. Although he was a behaviorist who considered learned habits of great importance, he believed that personality differences are determined by genetic inheritance.

Eysenck Inventory - Simply Psychology

The Eysenck Personality Questionnaire (EPQ) is a three dimensional personality assessment tool that was preceded by an overlapping two-dimensional measure called the Eysenck Personality Inventory (EPI). The EPI was developed by Hans and Sybil Eysenck [1] to measure the two broad dimensions of Extraversion-Introversion* and Neuroticism-Stability. These two 24-item measures were supplemented by a 9-item Lie scale in an attempt to guard against various concerns about response style.
