combustion chamber. Both of these ideas, with minor changes, are the basis for most modern gas turbines in use today. Marine Gas Turbine Engine Using a GTE to propel a ship goes back to 1937 when a Pescara free piston gas engine was used experimentally with a GTE. The free piston engine, or gasifier (fig. 1-5), is a form of diesel engine.

II.A.3 Brayton (or Joule) Cycle. Essentially all gas turbines are based on the Brayton cycle, which is sometimes referred to as a Joule cycle. In this cycle, fuel and air are pressurized, burned, pass through a gas turbine, and exhausted. The exhaust gases are generally used to preheat the fuel or air.
