Inorganic chemistry deals with synthesis and behavior of inorganic and organometallic compounds. This field covers all chemical compounds except the myriad of organic compounds (carbon-based compounds, usually containing C-H bonds), which are the subjects of organic chemistry.The distinction between the two disciplines is far from absolute, as there is much overlap in the subdiscipline of ...

As stated, inorganic chemistry deals dominantly with the 70 metal elements in combination with non-metals, with metal/metal chemistry and with combinations of non-metals among themselves, e.g. CO, CO 2 and CS 2 but excluding largely and especially larger compounds of carbon. Some of the chemistry of combinations of elements now becomes obvious, but it is convenient to describe first those in ...
