Colloidal silver is a solution of water containing nanometre sized particles of suspended silver. The total silver content is expressed as milligrams of silver per litre of water, or mg/L, which is numerically the same as parts per million (ppm). Silver has been used for at least six thousand years to prevent microbial infections.

### Colloidal Silver: Is It Safe? Benefits vs. Risks - Dr. Axe

Usually the flakes are suspended in demineralized water or another liquid. This form is marketed for oral use. Colloidal silver is often touted as an antibacterial agent and a topical wound...

### Colloidal Silver: Risks and Benefits

Colloidal silver products are made of tiny silver particles suspended in a liquid — the same type of metal used in jewelry, dental fillings and silverware. Manufacturers of colloidal silver supplements often promote their products by claiming that silver can boost the immune system, fight infection and treat cancer.

### Colloidal silver supplements: Are they safe? - Mayo Clinic

Colloidal silver is a solution that consists of very small silver particles suspended in a liquid. A "colloid" is a liquid that evenly distributes certain particles within it.

### Colloidal silver: Safety, risks, and uses

Marketed as a remedy for a range of health problems, colloidal silver is a solution of tiny silver particles suspended in a liquid base. It's typically taken orally, but some products are sprayed, applied to the skin, or injected into a vein.

**Colloidal Silver: Uses, Side Effects, Interactions, Dosage ...**

As silver oxidizes, it tends to tarnish. This layer of oxidation can be removed without polishing and scrubbing by simply dipping your silver in this non-toxic electrochemical dip. Another big advantage to using a dip is that the liquid can reach places that a polishing cloth cannot. This is an easy experiment and takes mere minutes!
