The “phased sequential” system is the last generation of injection LPG and CNG systems suitable for installation both in multipoint injection sequential vehicles and in multipoint injection “semi-sequential” and “full-group” vehicles. It is the most effective system that ensures the best results in terms of driving conditions and performance. The enriching strategies and consumption and emissions optimisation strategies generated by the petrol CPU are indeed unaltered in each ...

Sequential CNG - Tartarini Auto Industries

Injectors have two ends, both connected to the engine controller. Output signal is a series of pulses with a specific shape. There are two types of LPG/CNG injectors: low impedance type with resistance between 1 and 3 ohms; high impedance type with resistance between 11 and 15 ohms.
