work material. 6. The basic manufacturing processes are: casting or molding, forming, (heat) treating, metal removal, finishing, assembling, and inspection. 7. By casting, the desired shaped in final or near-final form, could be obtained. This greatly reduces the necessity for machining the hard-to-machine metal. Less machining

Manufacturing Production Process Introduction

A manufacturing process is the way a business will establish how it will produce its products for its customers. When a company begins manufacturing a product the process will be determined by factors such as consumer demand of products, the manufacturing technique of how a final product is completed (is it assembled by various components, involve raw material or chemicals?) and the available ...
