Advances in physics — for example, those in electromagnetism and thermodynamics — often resonate deeply with mathematics. At the School of Engineering, the BS in Applied Physics and Mathematics program serves as a means to bridge these 2 disciplines. The dual major allows you to gain a foothold in separate but substantial fields.

Following mathematics: the theory of partial differential equation, variational calculus, Fourier analysis, potential theory, and vector analysis are perhaps most closely associated with mathematical physics. These were developed intensively from the second half of the 18th century (by, for example, D'Alembert, Euler, and Lagrange) until the 1930s.. Physical applications of these developments ...
