A cataract—clouding of the lens inside the eye—is a common cause of poor vision and blindness among older adults. But cataracts can be removed and replaced with artificial lenses. Sound scary? It's not. "Cataract surgery is something that just about everyone will need if you live long enough.

What's the latest in cataract surgery? - Harvard Health

Alternatives to femtosecond lasers are entering the marketplace. New devices for cataract surgery are entering the marketplace that have benefits over femtosecond lasers for capsulotomies, according to some surgeons. "One of the benefits of the femtosecond laser is that it provides a perfectly round, perfectly centered capsulotomy," said Mark Packer, MD, Boulder, Colorado.

EyeWorld | New devices in cataract surgery

Cataracts are diagnosed through a simple eye exam that includes dilation (your pupils are widened with the help of eye drops) so that your eye doctor can thoroughly examine your eyes, looking for abnormalities in your cornea, iris, lens, and other areas at the front of your eyes; and specific signs of cataract at the back of your eyes.
