Since prehistoric times, people have pondered how life came to exist. This module describes investigations into the origins of life through history, including Louis Pasteur’s experiments that disproved the long-held idea of spontaneous generation and and later research showing that the emergence of biological molecules from a nonliving environment - or abiogenesis - is not only possible, but likely under the right conditions.

### Welcome to AP BIOLOGY!!!! NOTES: Chapter 1

Overview. Students explore the origin of life as they create coacervates, which provide evidence about how life may have formed on Earth. In the Guided Investigation, students follow a procedure to create coacervates, phospholipid vesicles similar to those created in the laboratory by Alexander Oparin in the 1920s as he investigated the origin of life.
