The service life of a given building structure is affected by: · Based on this we can define: Design of the building, its structure, joints and components · Quality of the individual materials and components · remain structurally fit for its intended use during its standard of construction

Service life and life cycle of building structures.

Many assets are designed with a 20-25 year useful service life and are therefore considered to be mid-life assets. This is one of the primary reasons why reserve fund studies include a 30-year planning horizon (ie., the window into the future). This enables the owners to anticipate and prepare for the majority of the asset replacement projects.
