Mental distress is a term used, by some mental health practitioners and users of mental health services, to describe a range of symptoms and experiences of a person's internal life that are commonly held to be troubling, confusing or out of the ordinary. Mental distress can potentially lead to a change of behavior, affect a person's emotions in a negative way, and affect their relationships with the people around them. Certain traumatic life experiences such as: bereavement ...

Mental distress - Wikipedia

Psychological First Aid is designed to mitigate distress during or right after a disaster or traumatic event. Psychological First Aid training has not been subjected to rigorous experimental testing in the field because it's not delivered in a standardized way and because of ethical issues involved in withholding care from people experiencing trauma.
