Design. The machine offered two modes of radiation therapy:: Direct electron-beam therapy, in which a narrow low-current beam of high-energy (5 MeV to 25 MeV) electrons was scanned over the treatment area by magnets;; Megavolt X-ray (or photon) therapy, which delivered a fixed width beam of X-rays, produced by colliding a narrow 100-times higher current beam of 25 MeV electrons with a target ...

While I found Your Code as a Crime Scene a totally innovative book, Software Design X-Rays builds on the already introduced ideas of hotspots and change coupling metrics and goes much deeper. It's not a repetition of the previous book and it does introduce new directions that were not present in YCCS. Still, obviously it's not so much a novelty that I would advise you to read it right after the first.
