Vectors are living organisms that can transmit infectious pathogens between humans, or from animals to humans. Many of these vectors are bloodsucking insects, which ingest disease-producing microorganisms during a blood meal from an infected host (human or animal) and later transmit it into a new host, after the pathogen has replicated.

Vector-borne diseases

Graduates of the MSc Molecular Biology of Parasites and Disease Vectors have undergone excellent general preparation for a career in laboratory research in biological sciences, in which molecular biology is widely applied, and are particularly well placed for careers in research or training in areas related to the molecular biology of organisms of importance to public health, pathogen, parasitic and vector-borne tropical diseases.
