Ocean Life | Smithsonian Ocean

Life, an open ocean on which all men sail. From the poverty, to the opulence, every boat sails silently across it's glistening waves. The opulent, sailing through the ocean on giant ships, built for the likes of kings and businessmen, look down upon the ocean as a blissful, blue painting, painted solely for their liking, and the waves as entertainment from their protected towers.

Marine life, or sea life or ocean life, is the plants, animals and other organisms that live in the salt water of the sea or ocean, or the brackish water of coastal estuaries. At a fundamental level, marine life affects the nature of the planet. Marine organisms, mostly microorganisms, produce oxygen and sequester carbon. Shorelines are in part shaped and protected by marine life, and some marine organisms even help create new land. The term marine comes from the Latin mare, meaning sea or ocean

Marine life - Wikipedia

The ocean is a continuous body of salt water that covers more than 70 percent of the Earth's surface. Ocean currents govern the world's weather and churn a kaleidoscope of life. Humans depend on ...
