implicating inflammation in the pathophysiology of BD, the immune system presents as a novel treatment target, providing hope for improved outcomes and tolerability.

### **Psychopharmacological Treatment - an overview ...**

Psychopharmacology is the study of the use of medications in treating mental disorders. The complexity of this field requires continuous study in order to keep current with new advances. Psychopharmacologists need to understand all the clinically relevant principles of pharmacokinetics (what the body does to medication) and pharmacodynamics (what the medications do to the body).

## **The Psychopharmacology and Treatment of Schizophrenia**

Psychopharmacological treatment of schizophrenia has unmasked a number of hypotheses based on potential alterations in neurotransmitter signaling. Historically, the dopamine hypothesis dominated this perspective, but as we noted earlier, an idea gaining prominence is focused on glutamate—namely, the glutamate hypofunction hypothesis of schizophrenia.

Psychopharmacology (from Greek ψῆχή,  
psṽkhē, 'breath, life, soul'; φάρμακον,  
pharmakon, 'drug'; and -λογία, -logia) is  
the scientific study of the effects drugs  
have on mood, sensation, thinking, and  
behavior. It is distinguished from  
neuropsychopharmacology, which  
emphasizes the correlation between  
drug-induced changes in the functioning  
of cells in the nervous system and ...
