Abundant evidence suggests that Civil War soldiers, like their twentieth-century counterparts, exhibited symptoms that today we would associate with war trauma, notably post-traumatic stress disorder (PTSD), a diagnosis that emerged out of the experiences of the Vietnam War. Yet for years historians failed to consider the possibility that Northern and Southern soldiers and veterans suffered ...

While research supports the use of psychotherapy, there is limited information on specific pharmacologic interventions for psychiatric disorders related to war trauma. Trauma-focused cognitive-behavioral therapy, in combination with resilience-based and symptom-based techniques that can take advantage of the child's social network, may be particularly helpful ( 10 ).
