Understanding Lung Cancer An Introduction

Introduction to Lung Cancer. Lung cancer is the second most common cancer, accounting for about one out of five malignancies in men and one out of nine in women. Unfortunately, over the past several years, while the incidence of lung cancer has gradually declined in men, it has been rising alarmingly in women. In 1940 only seven women in 100,000 developed the disease; today the rate is 42 in ...

Introduction to Lung Cancer | SEER Training

How lung cancer spreads. Lung cancer, like all cancers, can act differently in each person, depending on the kind of lung cancer it is and the stage it is in. But when lung cancer spreads outside the lungs, it often goes to the same places. The first place lung cancer usually spreads to is the lymph nodes in the center of the chest.

Understanding Lung Cancer: An Introduction for Patients ...

There are more than 100 types of cancer. Types of cancer are usually named for the organs or tissues where the cancers form. For example, lung cancer starts in cells of the lung, and brain cancer starts in cells of the brain. Cancers also may be described by the type of cell that formed them, such as an epithelial cell or a squamous cell.
